PROJECT SUN STREAK

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

-----  
TNG TARGET NUMBER: \_\_\_\_\_5140 SESSION NUMBER: 1 of 1  
DATE OF SESSION: 04 OCT 88 DATE OF REPORT: 04 OCT 88  
START: 0900 END: 1034  
METHODOLOGY: CRV VIEWER IDENTIFICATION: 025  
EVALUATION: MONITOR: 018  
-----

1. (S/NF/SK) MISSION: To access and describe the target using Stage VI methods.

2. (S/NF/SK) VIEWER CUEING:

a. Beginning: Describe the physical aspects of the target designated as target #5140.

b. Intermediate: During Stage 4, 025 had correctly identified a radar site, and was proceeding toward functions and purpose. 025 was given feedback information at this point that the site was, indeed, a radar site, and that the tasking was for physical aspects only, for this level of training. This satisfied 025's need for identifying the site, and 025 proceeded correctly to concentrate on physical aspects only.

3. (S/NF/SK) COMMENTS:

a. Inclemencies: None reported.

b. 025 proceeded quickly through Stages 1 and 2. 025 was kept from making Stage 3 sketches, so that Stage 6 perceptions would be inadvertently made to match the Stage 3 findings. 025 proceeded directly into Stages 4 and 5, and continued into Stage 6 as the session required it.

c. During this stage of training, 025 is intentionally being kept away from conceptual perceptions, in order to concentrate on the kenesethetically pure act of "probing" the physical target for perceptions, on an "inch-by-inch" basis. Using Stage 6 for conceptual and more intangible perceptions will be trained after 025 has become familiar with the process of probing individual spots on the Stage 6 matrix for extremely accurate detail, rather than trying to perceive the target in toto.

d. This session introduced O25 to the use of modeling clay for objectifying Stage 6 perceptions. O25 did very well with this medium, getting all the major gestalts of the target site, as well as fairly accurate perceptions of the arrangement of these gestalts at the site, but had some trouble with the accuracy of perception of the spatial relationships between the major site components (example: the "upside down V" of the radar array was correctly perceived to be V shaped and attached to the flat topped building, but was perceived as a V right-side-up). Further work with this medium will aim at training O25 in accuracy of perception of spacial relationships, both within and between major site components.

#### 4. EVALUATION:

a. Teacher's: O25 performed every task extremely well, followed instructions, and enjoyed the freedom provided by a new medium of work.

025

4 October 1988

#### Summary

The site is a structure and land interface with a hill nearby. There is energy motion present at the site and a roadway. The structure is off-white and square topped. There are people in this structure and intermittent radar tracking monitoring systems present. A separate structure has off shoots which get hot and have a flat surface on the right (see photos).
